SUMMARY

Experienced Java Backend Developer. I have been involved in Java Backend Projects. The main ones are "TRVL Car | Premium Car Rental" and "MyCampusmates". And languages I used to create projects include Java, SQL. I have experience with include JDBC, Mongo DB, Hibernate, API and Spring Boot.

I initially worked in manufacturing. I have 1,5 years of experience as a production/method engineer in automotive manufacturing field, so I have excellent lean production technics and team management skills. Also, team management has helped me to develop quick decision-making and problem-solving skills and has helped me to be responsive and calm in a fast-paced and ever changing environment. Moreover I always support that knowledge should be shared and I work by adopting this technique. This makes me a good team worker. Solving complex problems gives me pleasure. I'm passionate about creating innovative solutions that make people's lives easier. As a fast learner and innovator, I thrive in a fast-paced, dynamic work environment. I am always inquiring learn and ready to take on new challenges to improve my skills and knowledge.
